

先用莫耳數完成中和，再以剩餘強酸或強鹼求 pH

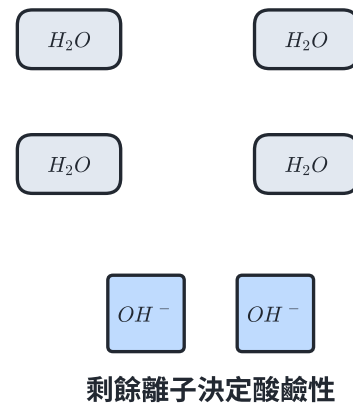

混合前

反應帳

混合後

4.0 mmol 生成的水；剩 2.0 mmol OH^-

$$[OH^-] = \frac{2.0 \times 10^{-3}}{100.0 \times 10^{-3}} = 0.0200 \text{ M}, \quad pOH = 1.699, \quad pH = 14.000 - 1.699 = 12.301 \quad (25^\circ\text{C})$$

圖中每個粒子符號代表 1.0 mmol；旁觀離子未畫出。
