

每對相連原子只有一個  $\sigma$  鍵；其餘鍵級由  $\pi$  鍵增加

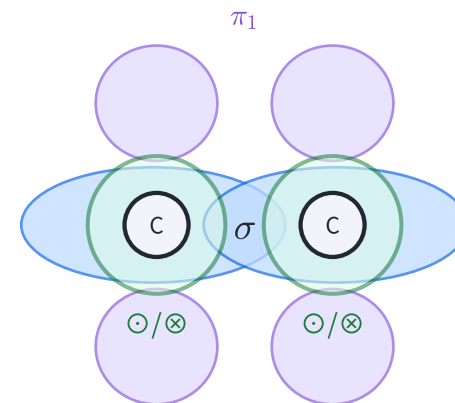

**C—C :  $1\sigma + 0\pi$**

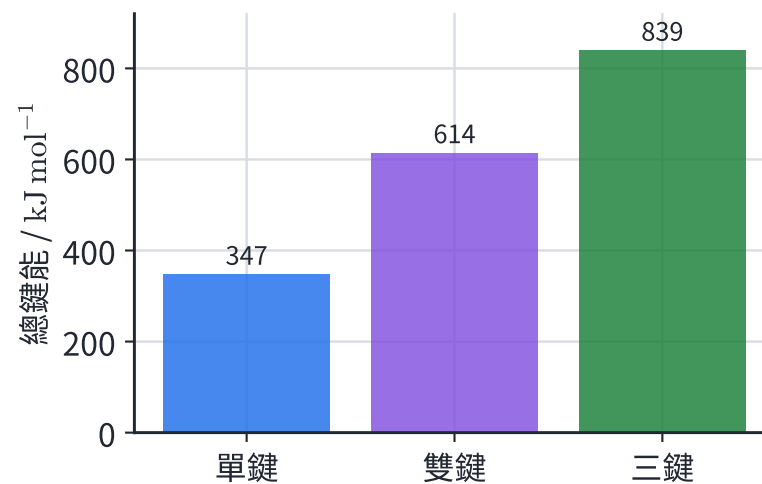

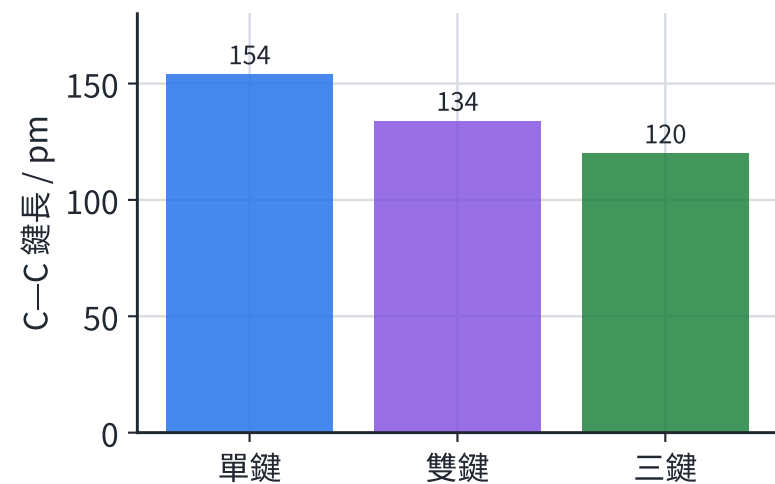

**C=C :  $1\sigma + 1\pi$**

**C $\equiv$ C :  $1\sigma + 2\pi$**

$\pi_2$ ：第二組 p 軌域垂直紙面 ( $\odot/\otimes$  為前後兩瓣)

單鍵：繞鍵軸轉動不破壞  $\sigma$  重疊

雙鍵：轉動會破壞  $\pi$  側向重疊
