

係數把不同物質的濃度變化換成共同的反應進度

$2NO + O_2 \rightarrow 2NO_2$ ：濃度斜率按係數成比例

除以化學計量係數後，各物質給同一反應速率

NO

$$-\Delta[NO]/\Delta t$$

$$0.050 \text{ M s}^{-1}$$

$\div 2$

O_2

$$-\Delta[O_2]/\Delta t$$

$$0.025 \text{ M s}^{-1}$$

$\div 1$

NO_2

$$+\Delta[NO_2]/\Delta t$$

$$0.050 \text{ M s}^{-1}$$

$\div 2$

$$r = -\frac{1}{2} \frac{\Delta[NO]}{\Delta t} = -\frac{\Delta[O_2]}{\Delta t} = \frac{1}{2} \frac{\Delta[NO_2]}{\Delta t} = 0.025 \text{ M s}^{-1}$$
