

標準還原電位是強度量：由兩端電位差求標準電池電壓

數值越大，作還原半反應的傾向越強

$$\begin{aligned} E_{\text{cell}}^\circ &= E_{\text{cathode}}^\circ - E_{\text{anode}}^\circ \\ &= 0.80 - (-0.76) = 1.56 \text{ V} \end{aligned}$$

為配平而乘 2 的 Ag^+ 半反應， E° 仍是 $+0.80 \text{ V}$
