

燃燒產物依序通過吸水劑與吸收二氧化碳的試劑

由 H_2O 求 H

$$\begin{aligned}n(H_2O) &= 0.360/18.0 \\&= 0.0200 \text{ mol} \\n(H) &= 2n(H_2O) \\&= 0.0400 \text{ mol}\end{aligned}$$

由 CO_2 求 C

$$\begin{aligned}n(CO_2) &= 0.880/44.0 \\&= 0.0200 \text{ mol} \\n(C) &= n(CO_2) \\&= 0.0200 \text{ mol}\end{aligned}$$

樣品只含 C、H、O

$$\begin{aligned}m(O) &= 0.600 - 0.240 - 0.040 \\&= 0.320 \text{ g} \\n(O) &= 0.0200 \text{ mol} \\C:H:O &= 1:2:1\end{aligned}$$
